Global Print 360

SIMPLIFY YOUR PRINT MANAGEMENT?

Managing a company's print environment can be tricky. Multiple devices, multiple sites, differing user requirements, can all cause your IT department major headaches. Not only is there costly downtime and a stretch on resources, it places a significant burden on the network, hampering productivity and response times.

We are living in an information age, where businesses need to be agile, with access to the right information at the right time to work as effectively as possible. Introducing Global Print 360, which empowers your users, ensuring your print network is powerful enough to cope with your ever-changing business demands.

Global Print 360 has helped many businesses completely eliminate the need for print servers by delivering a centrally managed direct IP printing solution.

Viable alternatives to print servers have been limited, but technological advances have now made it possible, creating flexible print environments that provide convenience to the end-user and greater functionality, without excessive hardware costs.

It's completely modular, so you can mix and match dependent on your requirements, Global Print 360 offers:

- Centralised Device & Driver Management
- Print Job Reporting & Monitoring
- Pull Printing
- Mobile Printing
- SNMP Monitoring
- Self Service Portal

PRINT INFRASTRUCTURE IS EVOLVING

Direct IP printing eliminates the need for print servers. When printing to local printers, all jobs are spooled and released locally, so no print jobs pass over WAN connections, which frees up the network. Only one virtual server is required to manage over 20,000 printers. If required additional virtual servers can be added for extra resilience.

Providing complete flexibility this server-less solution enables you to replace all the functionality that print servers provide, whilst adding new features that *simplify print management, improve productivity, reduce costs and IT support*. All via a centralised web application.

This revolutionary way of managing your print environment provides all the advantages from each of the legacy architectures of centralised

print servers and distributed print servers, whilst eliminating all of the risk, providing the best of both worlds for businesses. It removes the need for costly print servers and provides the flexibility of centralised direct IP printing across an organisation.

COST-EFFECTIVE ALTERNATIVE TO PRINT SERVERS

- Keeps all print jobs local.
- Removes single points of failure.
- Eliminates print job related WAN traffic.
- Reduces hardware infrastructure costs.
- Empowers end users.
- No costly downtime - When the central management server goes offline, everyone can still print.
- Removes hardware from remote locations, giving greater flexibility and control.
- Uses one single secure web app to manage the entire print environment.
- Users can print to any device on the network, wherever they are, reducing costly helpdesk calls.

PRINT MANAGEMENT MADE EASY

Administration of your print network suddenly becomes very easy and takes the load off your stretched IT departments and reduces helpdesk calls. Removing and adding devices is really simple, you can manage all drivers across a mixed fleet from one portal, end user's can login and pull any changes and drivers required.

Powerful driver management means that Global Print 360 connects to the local print driver, so whether you are in London one day and Paris the next you are securely connected and ready to print. The simplicity of the driver management means there is no longer a need to store all local drivers and provides greater flexibility.

Global Print 360 also provides the ability to accurately monitor all devices on the network,

so that any issues can be alerted and actioned accordingly.

Automation functionality can be implemented simply to manage all day to day tasks, which can improve productivity for your workforce.

SECURE PRINTING

We've all seen stacks of prints left by the printer and all too often this gets overlooked, but unclaimed prints create huge waste and escalating print costs for an organisation. Not to mention the worry of sensitive and confidential documents falling into the wrong hands.

The pull printing module overcomes this issue, putting measures in place to securely print to any device on the network, whilst still ensuring that documents remain secure.

All print jobs are sent via a universal print driver and then the documents are retrieved in person at the selected device, users can authenticate themselves via a PIN code or proximity card and the prints are released. Any jobs not claimed after a specified time period simply get deleted from the print log, avoiding any unnecessary print waste.

The self-service portal can be used to select the printers the users want access to and click and install them, no matter which office they are visiting. Long calls to the IT department will be a thing on the past!

DYNAMIC PRINT ON-THE-GO

Leading industry analysts, Gartner estimate that 50% of all employees will be using their own devices in the workplace by 2018. The way people work and use technology is continually evolving, and the need to access information and print securely on-the-go has never been greater.

The emergence of Bring Your Own Device (BYOD) means organisations need to have strategies in place to cope with secure printing within the network from users on their own devices. Global Print 360 offers that flexibility for printing in BYOD environments. Guest printing capabilities for visitors to your sites mean they can walk to any printer and release their prints securely, whatever manufacturer or location, avoiding unnecessary calls to the IT department to provide access.

The powerful browser based release capabilities enable any device with a browser or any mobile device to access the secure release app and release jobs to any printer on the network. Providing greater accessibility and ensures document security isn't compromised, whilst keeping cost and print waste in check.

AFFORDABLE & FLEXIBLE

Global Print 360 is available as a fully managed cloud environment, private cloud or as an on-premise version, you can choose whichever option best suits your needs.

The nature of the solution means it's at an accessible price point for smaller businesses, right through to larger corporations. It's completely modular depending upon your organisations requirements, so you can take the elements which suit your specific needs. And, because it's on a Software-as-a-service (SaaS) platform you pay on a per seat basis, so it's scalable and can grow with your business over the long-term.

Plus, it's universal and works with most of the major manufacturers, and can easily integrate into your current print environment, so you don't necessarily need to upgrade your print hardware at the same time.
